## 2600 BC

Before the invention of the syringe, that now allows us to inject T-cells directly into the tumorous growth, physicians had to be resourceful. As noted by Kucerova and Cervinkova (2006) in the year of 2600 BC, Imhotep came up with what we now know to work as the definitive cure for cancer, but I suspect he still couldn't reach all of the parts of the human body. Tumors deep inside of our bodies were most likely undetectable and out of reach.

Kucerova and Cervinkova either through their own volition or through outside pressure call this cancer treatment “spontaneous” regression, even though there is nothing spontaneous about any of this. Imhotep in 2600 BC (!) found the cure where he, according to Kucerova and Cervinkova, created an incision and caused a local infection in the tumor.

The infection in the tumor draws T-cells, anti-bodies, that as I have now seen not only in The Netherlands but worldwide, also at Harvard, have been shown to eat the cancer and multiply off of it. Somehow the people that infiltrated and obstruct science worldwide now enter into a bogus discussion of how you get the T-cells to the cancer.

The answer has been shown: you can apply them directly to the tumor through an injection or by opening up the body and then injecting them into the cancer if our needles aren't long and precise enough. When you apply T-cells directly to cancer in a medical oven, they devour it and multiply off of it to consume the cancer even faster.

It has been demonstrated time and time again, essentially also by the wise Imhotep that displayed abilities of *this* time (2021 AD) that this works. The reason that the cure is obscure is that we are under continuous attack by national socialists, communists, Marxists, that lack an integral view of reality infiltrating and attacking science.

Classical treatments typically focused on getting the T-cells to the cancer by increasing blood pressure in the region through heat or causing an infection. They didn't have the optimal instrument, a syringe, but they understood that the body should heal itself. The doctor provides care and the power our bodies hold within them heals us.

## MEDICVS CVRAT \* DEVS SANAT

These weren't the doctors that we have today that are sponsored by industries to prescribe particular chemicals only *labeled* “medication.” These were people that, following the Hippocratic oath, worked for the love of their patients and treated and cured them. They were wise men and women, pharaohs, kings, queens, people willing to sacrifice themselves completely that asked you what they could do for you, rather than you for your country.

The pyramids weren't built through slavery, that has even been shown to be impossible. They were built through ingenuity.

The fact that people die of cancer is purely political and based on financial gain at the cost of millions if not billions of lives so far. The fact that people have been dying all this time is nothing less than genocide. It's political, a matter of power overshadowing the principle that we should live and let live, and considered by those that pursue it to be the game of life.

## Chemotherapy Kills the Cure

When I reference literature on the terms “chemotherapy” and “T-cells,” it speaks of “surviving T-cells,” as in the T-cells that didn't die of the chemo, e.g. Das et al. (2020). This means that chemotherapy kills the part of our immune system responsible for curing cancer.

This means that chemotherapy isn't therapy at all, but what fascists call “neutral language,” known to the general public as Orwellian “newspeak” or “double speak,” for poison. You have to call “bullshit” when you see it.

We don't need fewer, we need more T-cells to get to the cancer. Without invasive treatment this was established by raising the blood pressure or causing an infection. I suspect that with cancerous growths in the brain, the skull pressure actually cuts off and limits the blood flow to the tumor, shielding it from the T-cells, making sure that it can continue to grow.

*General pressure* alone isn't enough.

Classically, you would need to raise the *blood pressure* to increase the T-cell count in the area, also pushing them beyond the blood barrier into the tumor. The modern cure isn't “chemotherapy” poisoning, because in reality you're supporting the cancer, killing the patient if the patient doesn't survive the chemicals.

The modern cure is to inject the T-cells directly into the cancer. They don't have to find the cancer. Imhotep showed us the way: we need to find the cancer and inject the T-cells directly into the cancer. I bow to Imhotep and I listen to him for the people to live. I evade the malpractice of poisoning patients, killing them so one may receive one's bread.

I die for the people to live, not the other way around.
